

# FAQ & Sales Objection Handling

## Core promise

ShipZen helps shippers recover money from carrier service failures, lost or damaged packages, delivered-not-received issues, return-to-sender errors, and billing mistakes. The model is success-based: no upfront fees, no subscriptions, and ShipZen only gets paid when money is recovered.

## Positioning summary

| What prospects care about | ShipZen answer                                                                                                                    | Sales emphasis                                                                  |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| Risk                      | No upfront fees or subscription.                                                                                                  | If nothing is recovered, the client pays nothing.                               |
| Time                      | Hands-off carrier account sync and automated filing.                                                                              | No new daily workflow for ops or finance.                                       |
| Recovery scope            | More than late deliveries: lost, damaged, DNR, RTS, billing errors, surcharges, duplicate charges, and dimensional-weight issues. | Most vendors and in-house teams miss categories beyond obvious late/lost cases. |
| Differentiation           | Automation plus former carrier claims experts.                                                                                    | AI catches volume; humans handle nuance, appeals, proof, and carrier pushback.  |
| Control                   | Refunds or credits go directly to the customer carrier account.                                                                   | ShipZen invoices its fee after the client receives the credit.                  |

# 1. Website-Ready FAQ - Short Version

Use this section for the public website accordion. Keep answers short, confident, and easy for a prospect to scan.

## **What does ShipZen do?**

ShipZen audits your carrier shipments and files eligible claims to recover money from service failures, lost or damaged packages, delivered-not-received issues, return-to-sender errors, and billing mistakes. We help recover both shipping cost and product value where applicable.

## **How is ShipZen different from basic claims software?**

Most tools rely on automation only. ShipZen combines real-time audit automation with human claims experts who understand how carriers review, deny, and approve claims.

## **Do we need to switch carriers?**

No. ShipZen works with your existing carrier accounts, negotiated rates, reps, and fulfillment workflow.

## **How long does setup take?**

Setup is fast and low-lift. We securely connect to your existing carrier accounts and begin auditing eligible shipments without requiring your team to change how it ships.

## **What carriers do you support?**

ShipZen can support major parcel carriers such as UPS and FedEx, depending on your account setup, service types, and available claim paths.

## **What shipping issues can you recover for?**

We audit for late deliveries, lost packages, damaged goods, delivered-not-received cases, return-to-sender issues, duplicate charges, dimensional-weight errors, incorrect surcharges, and other recoverable billing mistakes.

## **Can ShipZen recover the product value too, or only the shipping cost?**

Yes, when the claim type and carrier rules allow it. For late-delivery or service-guarantee claims, recovery usually applies to the shipping charge only. For lost or damaged shipments, ShipZen can pursue product-value recovery when the carrier allows it, but reimbursement depends on declared value, carrier liability limits, and proof such as invoice value, replacement cost, item details, photos, or customer documentation. For UPS and FedEx, the first \$100 of shipment value is typically covered under standard liability. If the item is worth more than \$100 but no higher declared value was added and paid for at the time of shipment, the carrier may limit product-value reimbursement to \$100.

## **Can you recover product value too?**

Yes, when the claim type and carrier rules allow it. Product-value recovery usually requires proof such as invoice value, replacement cost, item details, photos, or customer documentation.

**How far back can you audit?**

It depends on the carrier and claim type. Late-delivery refunds often have very short windows, while lost, damaged, and billing claims may allow longer windows. ShipZen prioritizes real-time filing so opportunities do not expire.

**Does filing claims hurt our carrier relationship?**

No. Eligible refunds and credits are part of carrier agreements and service policies. ShipZen files professionally and within the applicable rules.

**What if we signed a late-delivery waiver?**

A late-delivery waiver may limit service-guarantee refunds, but it usually does not eliminate other recovery categories such as lost packages, damage, duplicate charges, invoice errors, dimensional-weight mistakes, or certain surcharge disputes.

**How much does ShipZen cost?**

ShipZen uses success-based pricing. There are no upfront fees and no subscriptions. If we do not recover money, you do not pay us.

**How does the 50/50 split work?**

The carrier credits the full refund to your account. ShipZen invoices for 50% of the successfully recovered amount at the end of the month.

**Do you take the refund before we receive it?**

No. Refunds and credits go directly to your carrier account first. ShipZen invoices separately after the recovery is received.

**How do we see what was recovered?**

You receive transparent reporting that shows what was recovered, where it came from, and the claim category behind each credit.

**Is our data secure?**

ShipZen uses secure carrier-account connections and only accesses the data needed to audit shipments, validate exceptions, and file claims. We do not sell customer data.

**What does our team need to do after setup?**

Very little. ShipZen runs in the background: monitoring shipments, flagging exceptions, preparing claims, filing eligible recoveries, and tracking outcomes.

**What happens if a claim is denied?**

When a valid claim is denied, ShipZen can review the reason, correct documentation gaps, and appeal or refile when the carrier rules allow it.

**How do we get started?**

We start with a quick look at your shipping volume, carrier mix, service types, and biggest pain points. From there, ShipZen estimates recovery opportunities and confirms the best setup path.
